Live Projects: [CodeSense](#) · [AI Resume Analyzer](#)

SUMMARY

B.Tech Computer Science (AI & ML) student who builds and ships full-stack, production-grade software — from backend APIs and deployment infrastructure to the ML/LLM systems that power them. Shipped two applications end-to-end (React/FastAPI/Docker), integrating third-party LLM APIs behind clean internal abstractions, RAG pipelines, and strict schema-validated output. Comfortable across the stack: core CS fundamentals, REST API design, containerized deployment, and applied ML — seeking a Computer Science Engineering role to build and scale real software.

EXPERIENCE / PROJECTS

CodeSense — RAG-Powered Code Review Assistant

React · FastAPI · LangChain · ChromaDB · sentence-transformers · Groq API (Llama 3.3 70B) · Docker · SSE

- Designed and built a full-stack application — React/Monaco Editor frontend and FastAPI backend — with a RAG pipeline (LangChain, ChromaDB, sentence-transformers) grounding LLM output in relevant code context across 4 analysis modes (review, explain, document, refactor).
- Integrated the Groq API (Llama 3.3 70B) behind an internal API layer with structured prompt templates and schema-validated output, decoupling the frontend from the underlying model provider.
- Implemented Server-Sent Events (SSE) streaming to replace blocking request/response calls, cutting perceived first-token latency to sub-second.
- Owned the project end-to-end: containerized with Docker, deployed backend (Render) and frontend (Vercel), and authored the repo documentation other developers use to run it.

AI Resume Analyzer — LLM-Driven Document Analysis Tool

Python · Groq API · Llama 3.3 70B · PyMuPDF · Plotly · ReportLab

- Built a Python pipeline that extracts text from PDF resumes (PyMuPDF, pdfplumber), constructs structured prompts, and queries Llama 3.3 70B for a 10-dimension analysis (match score, skill gaps, ATS report, interview questions).
- Enforced a strict JSON output schema on the LLM response to eliminate inconsistent or unparseable output — a reliability pattern for any automated downstream pipeline.
- Built the full pipeline from raw model output to a polished UI: interactive Plotly visualizations and a downloadable ReportLab PDF report.

Telemetry Unifier — IoT Data Transformation Pipeline

Python · JSON · ETL · Data Wrangling

- Designed a Python ETL pipeline to ingest IoT sensor data from multiple heterogeneous JSON sources, normalizing inconsistent schemas into a unified structure for downstream processing.

SKILLS

- Languages: Python, Java, C++
- Backend & Infrastructure: FastAPI, REST API design, SSE streaming, JSON schema validation, Docker, Git/GitHub, Render, Vercel
- AI / ML & LLM Tooling: LangChain, RAG pipelines, ChromaDB, embeddings (sentence-transformers), vector search, prompt engineering, Groq API, Llama 3.3 70B, scikit-learn
- Frontend & Data: React, Streamlit, NumPy, Pandas, Matplotlib, Plotly, PyMuPDF, pdfplumber, ReportLab
- Core CS: Data Structures & Algorithms, Object-Oriented Programming, System Design, Cloud Computing

EDUCATION

Vellore Institute of Technology (VIT) Bhopal

Expected Graduation: May 2028

B.Tech, Computer Science Engineering (Artificial Intelligence & Machine Learning)

CERTIFICATIONS

- Applied Machine Learning in Python — University of Michigan / Coursera (May 2026); supervised & unsupervised learning, model evaluation, scikit-learn
- NPTEL Cloud Computing — Elite, 87%; distributed systems, cloud infrastructure, scalable architecture
- Deloitte Data Analytics & Technology Job Simulation — Forage (March 2026)
- ServiceNow Virtual Internship Program — ServiceNow University, AICTE & SmartBridge (July 2026); ServiceNow Administration Fundamentals, Agentic AI, Automated Test Framework (ATF), Flows, CSA Exam Preparation
- AI Tools & ChatGPT Workshop — Be10X
